

Expert in Mixing and dosing efficiency

HP MIXING HEAD

FOR CONTINUOUS INSULATION PANELS LINES

CONCEPT:

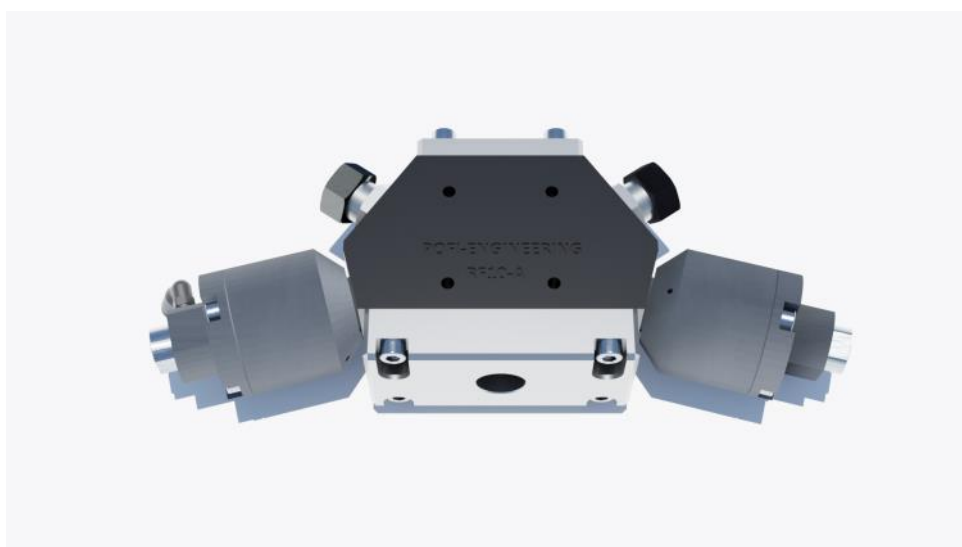

Continuous line mixing heads are the result of many years of experience in the field of sandwich panels.

The rearward-inclined injectors increase turbulence and thus improve mixing.

The whole system is designed for a long service life.

Production costs are optimized to offer this mixing head at a competitive price.

Manufactured in Luxembourg, we have all the parts in stock at our facilities.

Better mixing
Better foam quality
Better prices

USEFUL INFORMATION

Our offices are open Monday to Friday from 8am to 18pm. Outside these hours thank you for contacting us by e-mail, we will respond quickly.

The design of the two nozzles create a rotative effect to the components, each rotation effect are opposite to increase the mixing efficiency.

Sizes available:

RF10A Flow from 80 to 400 g/s

RF12A Flow from 120 to 560 g/s

RF14A Flow from 200 to 780 g/s
